

Trends in crime and criminal justice, 2010

Decreases in recorded crime except for domestic burglary

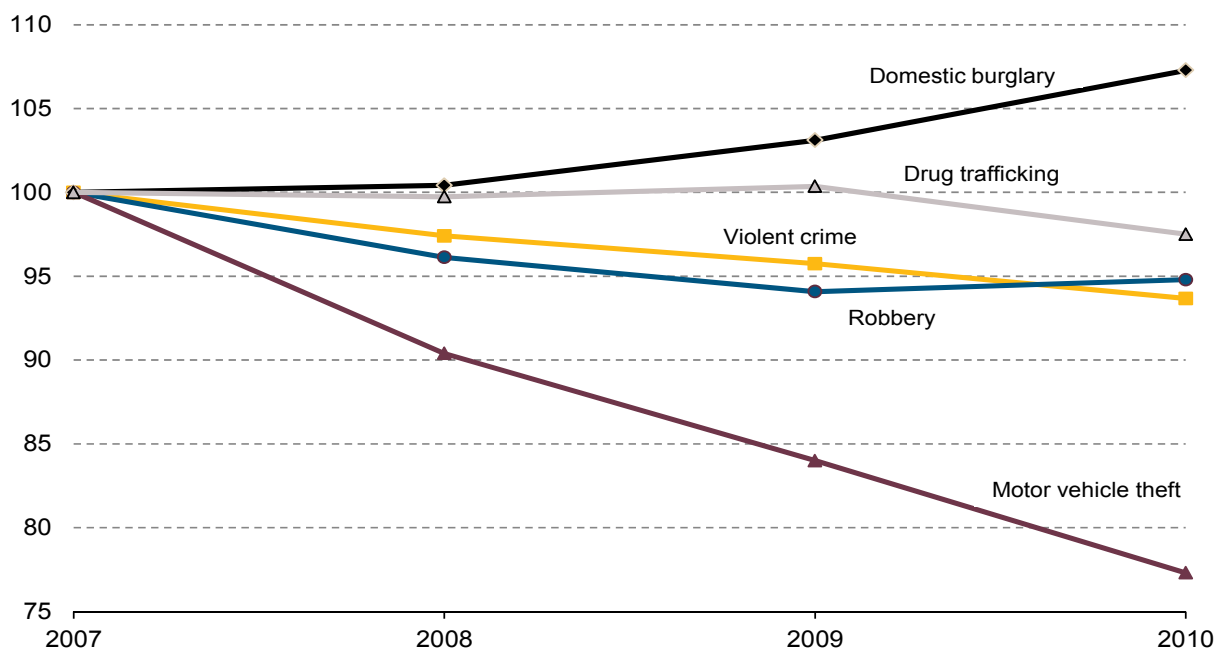

The latest collection of data indicates a general tendency towards a decrease in the levels of recorded crime across European Union Member States between 2007 and 2010. The number of most types of crimes recorded by the police in the European Union has fallen (see Figure 1).

While crimes linked to drug trafficking, robbery and violent crimes decreased between 3 and 6% between 2007 and 2010, the number of motor vehicle thefts has fallen substantially faster over the same period (-23%).

In contrast, domestic burglary is a category with a rising trend in the European Union. Compared to 2007, 7% more cases of domestic burglary were reported in 2010.

The following publication gives an insight into the trends in the various categories of recorded crime and furthermore looks at police officer numbers and imprisonment rates.

Figure 1: Recorded crime trends across EU Member States*, 2007 – 2010 (2007=100)

- (*) Due to inconsistencies in time series and unavailability of data, the EU figures do not include all 27 Member States:
- Violent crime: Estonia, Spain, Cyprus and Finland excluded
 - Robbery: Ireland, Spain and Finland excluded
 - Domestic burglary: Spain and Finland excluded
 - Motor vehicle theft: Spain and Finland excluded
 - Drug trafficking: Spain, Hungary and Finland excluded

Crimes recorded by the police

The crime statistics presented here cover offences recorded by police in the Member States of the EU and some other European countries. These figures do not purport to describe all crime in Europe: some crime goes unreported; and changes in rates of particular offences may result from changes in the focus of police activity.

There is usually no straight match to be made in types and levels of crime between countries, because legal and criminal justice systems differ in such areas as: definitions of crimes¹; methods of reporting, recording and counting crimes; and rates of reported to unreported crime².

Although national figures have been aggregated to provide EU level estimates, this is only for the purpose of identifying overall trends. Any inferences at the EU or Member State level should be based on trends over time.

Total recorded crime

The figures for total recorded crime³ show only offences against the penal or criminal code; less serious crimes (misdemeanours) are excluded. The number of crimes recorded in the EU has been steadily decreasing since 2005 (see Figure 2), with 10% fewer crimes recorded in the EU in 2010 than 5 years earlier.

Figure 2: Trend in recorded crime, 2005-2010*

(*) Due to inconsistencies in time series and unavailability of data, these EU figures do not include Estonia, Ireland, Spain, France, Latvia and Finland.

Source: Eurostat (online data code: [crim_gen](#))

¹ For example, Greece, Cyprus, Luxembourg, Iceland and Liechtenstein do not distinguish "domestic burglary", and count all burglary (in shops, garages etc.). Their figures cannot therefore be compared directly with other countries which only include burglary in a dwelling.

² For further details of the factors which influence the crime figures, please consult the Methodological Notes on page 15.

³ The figures for violent crime, property crime and drugs offences do not add up to all crime; they are presented as a closer look at selected offences.

When looking at the detailed national figures, the situation is nevertheless more balanced: twelve EU Member States saw their number of crimes increase within this five-year period (see Table 1).

In contrast, this number decreased in 13 EU countries, the most noticeable changes being recorded in Malta (-28%), Greece (-27%) and England & Wales (-25%).

The latter has largely influenced the EU downward trend with the largest decrease of crimes in terms of registered cases (-1.5 million) among EU Member States over this period.

Beyond the EU borders, the total number of crimes recorded by the police in Turkey increased by 57% between 2007 and 2010 (following a break in the series in 2006).

Violent crime

The figures for violent crime comprise those for violence against the person (such as physical assault), robbery (stealing by force or threat of force) and sexual offences (including rape and sexual assault). Close analysis of this class of crime is difficult because not all Member States use the standard definition. However, the general trend at the level of the EU is a decline of about 6% in the number of these offences recorded between 2007 and 2010.

This overall decline is strongly influenced by the figures from England & Wales, where there was a fall of over 146 thousand violent crimes recorded between 2007 and 2010 (Table 2).

Looking at other Member States, the picture appears heterogeneous, with significant rises between 2007 and 2010 in Hungary (+30%), Denmark (+28%) and Ireland (+19%) and large decreases in Latvia (-26%), Lithuania (-22%) and Slovakia (-21%).

Homicide

Homicide is defined as the intentional killing of a person, including murder, manslaughter, euthanasia and infanticide. It excludes death by dangerous driving, abortion and assisted suicide.

Homicides are reported fairly consistently and definitions vary less between countries than for other types of crime. They are normally counted by numbers of victims (rather than numbers of cases as for other types of crime). The results presented are for completed homicides, except for Latvia where the figures include attempted homicide.

Furthermore, in some countries, the police register homicide as any death that cannot immediately be attributed to other causes. It may, therefore, be over-represented in the statistics.

The number of homicides recorded in the individual countries is shown in Table 3.

The rate of homicides per 100 thousand inhabitants (Figure 3) reveals a downward trend: comparing the average ratios for 2005-2007 with those of 2008-2010, a decrease can be noted for all countries

except Denmark, Greece and Malta. The ratio remained unchanged for the Netherlands.

Despite decreases in the homicide rates for the three Baltic Member States, the number of homicides per 100 thousand inhabitants remained higher in these countries than in all other Member States.

Outside the EU, in Turkey, the average annual homicide rate almost halved between 2005-2007 and 2008-2010 (Table 3).

Source: Eurostat (online data code: [crim_gen](#))

Robbery

Robbery is a particular type of violent crime, defined as stealing by force or by threat of force. It includes mugging (bag-snatching) and theft with violence.

At the level of the EU, the number of robberies has dropped by 5% since 2007, mainly due to significant decreases reported by Italy, Poland, England & Wales and especially the Baltic States, where the number of recorded cases has fallen by 29% (Table 4). In complete contrast are the few countries which recorded large increases: the number of robberies more than doubled in Denmark, Greece and Cyprus between 2007 and 2010.

Property crime

Property crime covers the stealing or destruction of property. Data for domestic burglary and theft of a motor vehicle are presented below and show different trends (see Tables 5 and 6).

Domestic burglary is defined as gaining access to a dwelling by force in order to steal goods. At the level of the EU this type of crime increased by over 7% between 2007 and 2010. Among the Member States with a continuous data series over this period, the highest increases in the number of recorded cases occurred in Greece (+62%) and Romania (+31%). Conversely, large decreases (between 20% and 30%) were reported by Luxembourg, Austria and Slovakia over the three years.

Theft of a motor vehicle covers thefts of cars, motorcycles, buses and lorries, as well as construction and agricultural vehicles.

Motor vehicle thefts have steadily fallen in recent years, partly as a result of technical improvements in vehicle theft deterrents. At the EU level, the

number of offences recorded under this category of crime decreased by 23% between 2007 and 2010, with a sizable fall in England & Wales. Spain has also seen large falls since the introduction of a new data series in 2008.

Only four countries saw the number of motor vehicle thefts increase between 2007 and 2010. In Bulgaria there was an increase of 8%; increases of around 20% were reported by Cyprus and Greece, while in Romania, the number of thefts over the same period increased by 39%.

Drug offences

Drug trafficking is a sub-set of the broader class of drugs offences. It includes the illegal possession, cultivation, production, supplying, transportation, importing, exporting and financing of drug operations.

Compared to the trends registered for the other types of crime, the number of drug trafficking offences has remained relatively stable across EU Member States since 2005 (see Table 7). A steady decrease in drug trafficking was recorded in Germany, the country with the highest number of such criminal offences (accounting for more than 20% of the total EU drug trafficking offences in 2010). A counter-balancing effect was created by most other EU countries (19 out of 27) which recorded increases in the number of drug trafficking offences between 2005 and 2010. Various breaks in series should however be observed, the most noticeable being that for Hungary between 2008 and 2009, which resulted in a large decrease in the number of registered offences.

Beyond the EU borders, the number of crimes linked to drug trafficking in Turkey more than tripled between 2007 and 2010 (following a break in the series in 2007).

The number of police officers remains stable

Police officers include criminal police, traffic police, border police, gendarmerie, uniformed police, city guard and municipal police, while excluding civilian staff, customs officers, tax police, military police, secret service police, special duty police reserves, cadets and court police. Variations in this definition do exist between jurisdictions however.

The total number of police officers across the EU has not changed significantly over the last few years (see Table 8). Italy, Germany and Spain have the largest number of police officers at a national level, and together account for 47% of the total number of police officers registered in the EU. This proportion has increased from 44% in 2006.

A steadily increasing prison population

The prison population figures comprise adult and juvenile convicted prisoners and pre-trial detainees in all types of prison establishments. Non-criminal prisoners held for administrative reasons (such as investigation of immigration status) are excluded.

In 2010, there were about 638 000 prisoners in the EU compared with just over 617 000 prisoners in 2005. Table 9 shows the national prison populations and rates per 100 000 inhabitants. When the average prison population rates for the two periods 2005-2007 and 2008-2010 are ranked (Figure 4) the three Baltic countries have the highest rates in both periods, although the prison

population rate for Estonia has fallen to 264 prisoners per 100 000 in 2008-2010. The EU average for 2008-2010 is 126 prisoners per 100 000 inhabitants.

The lowest rates are found in the Nordic countries and Slovenia (between 62 and 74 prisoners per 100 000 inhabitants).

Outside the EU, Turkey's prison population more than doubled between 2005 and 2010. The prison population also increased noticeably in Montenegro, Croatia and Serbia.

METHODOLOGICAL NOTES

Developing EU Statistics on crime and criminal justice

Eurostat received a mandate under the 2004 *Hague Programme*⁽¹⁾: *strengthening freedom, security and justice in the European Union* to develop comparable statistics on crime and criminal justice, and a series of measures towards this end have been defined in the Commission Communication *Measuring Crime in the EU: Statistics Action Plan 2011-2015*⁽²⁾.

Data collection

The methodology used in this publication draws upon that developed by the European Sourcebook of Crime and Criminal Justice Statistics⁽³⁾, in particular the definition and measurement of criminal offences, and upon the Surveys on Crime Trends conducted by the United Nations Office on Drugs and Crime⁽⁴⁾.

Countries were asked to adhere to a standard definition when assembling the figures and to provide details of any divergences.

Figures for the United Kingdom are reported separately (as UK: England & Wales, UK: Scotland and UK: Northern Ireland), owing to the existence of three separate jurisdictions.

Comparisons

The data are taken from information recorded or reported by the police. Direct comparisons of crime levels based on the absolute figures can be misleading as they are affected by many factors, including:

- different legal and criminal justice systems
- rates at which crimes are reported to the police and recorded by them
- differences in the point at which crime is measured (for example, when reported to the police, on identification of suspects, etc.)
- differences in the rules by which multiple offences are counted
- differences in the list of offences that are included in the overall crime figures

Figures for the prison population may also be affected by many factors, including:

- number of cases dealt with by the courts
- the percentage receiving a custodial sentence
- the length of the sentences imposed
- the size of the population on remand
- the date of the survey, especially where amnesties apply

For these reasons, direct comparisons of crime levels in different countries cannot be made, except misleadingly. So rates per head of population are not presented in this publication, except for homicide and prison population where the figures may be more readily comparable. In these cases, rates per 100 000 head of population averaged over 3 years have been calculated.

Care should be taken when considering low numbers: homicide rates may vary considerably between years especially in small countries, where there may be jumps from no homicides one year to one or two the next.

In general comparisons are best made on trends rather than levels, on the assumption that the characteristics of the recording system within a country remain fairly constant over time. Even here, however, there are many exceptions as methods change, causing breaks in the series, indicated as footnotes in the individual tables. The colon symbol ':' is used to indicate missing information but also to indicate that definitional changes make comparisons impossible. Fuller information on these changes is given in the metadata files on the Eurostat website.

Where national series without definitional changes are available for the years between 2007 and 2010, indices have been calculated using the 2007 figure as a base, in order to make it easier to follow the trends:

$$\text{Crime index } I_i = (C_i / C_{\text{base}}) * 100$$

I_i = index number for year i

C_i = number of offences recorded by the police for year i

C_{base} = number of offences recorded by the police for the base year

Eurostat website

The website allows users access to the data and the metadata. There are tables on total crime from 1950 onwards and from 1993 for some specific offences, from 1993 for the number of police officers and from 1987 for the prison population. As already noted above, comparability of the figures between countries is difficult to achieve and **users are strongly advised to consult the metadata files when referring to the figures**. The metadata files contain additional information on the precise definition of the offence used by each country and are available through the following link:

European Statistical Data Support:

With the members of the 'European statistical system', Eurostat has set up a network of support centres in nearly every Member State and in some EFTA countries.

Their role is to provide help and guidance to Internet users of European statistics.

Contact details for this support network can be found on the Eurostat website at:

<http://ec.europa.eu/eurostat/>.

All Eurostat publications can be ordered via EU Bookshop:
